

Vitamin E (Natural) Powder

INGREDIENTS: d-alpha tocopheryl acid succinate 62.5 iu/g (52mg/g)

DESCRIPTION: **Vitamin E (Natural) Powder** is a natural Vitamin E supplement for horses, dogs and greyhounds.

Vitamin E (Natural) Powder is an antioxidant, which helps to maintain general health, reproduction, athletic performance and vitality.

Although Vitamin E can be found in many feed sources, such as pasture, grains and hay, it is very sensitive. The levels of Vitamin E in these food sources can be greatly decreased when being harvested and processed. Even storage can affect Vitamin E levels. Therefore, supplementation may be necessary to maintain the levels required. **Vitamin E (Natural) Powder** is a fat soluble vitamin, and is easily absorbed in the body.

PACK SIZE: 250g, 500g, 1kg, 2.5kg and 5kg

DIRECTIONS FOR USE: Give daily mixed in with feed.

Scoop: Small end 220iu (3.5g) / Large end 1000iu (16g)

Horses: 1000iu or as required

Dogs/Greyhounds: 50iu or as required

PRECAUTIONS: Avoid administering with any iron supplement. Where both are required, give Vitamin E in the morning and the iron supplement in the evening, or administer on alternate days. Protect from light.

SPECIAL FEATURES: **Vitamin E (Natural) Powder** is made with d-alpha tocopheryl acid succinate, which is a natural form of Vitamin E, sourced from plants. Being natural, it is more readily absorbed, and is retained for longer periods, in the body than synthetic forms.

Vitamin E is a natural biological antioxidant, which helps to eliminate free-radical build up in the animal's muscles. Antioxidants work within the cell membrane, which encloses the cell. Therefore, the quicker an animal can remove free radicals from their muscles, the quicker they will be able to recover.

Vitamin E (Natural) Powder is Australian owned and made.
